I need you to gather a dataset for me. Below are many examples. I need you to scrape OpenAI's Company Announcement/News Page: https://openai.com/news/company-announcements/

On this page, you will be reading headlines and articles to see which announcements are in regard to OpenAI partnerships. I have given you some examples below. For the data, you will provide me with a sheet with the following:

Date of Partnership Announcement, Partner Name, Partner Type (Government, Education, Journalistic Outlet, Other, or make other names that you seem fit to explain Partner Type), Hyperlink to Partnership Announcement, Location of Partnership (If there is a specific geographical location, City or Country or both), Recurring Partnership? (Yes or no, does the partnership have multiple articles/multiple phases?) Partnership Involves Monetary Donation? (Yes or No), Size of Monetary Donation, Partnership Involves Licensing (Yes or No), Amount of Licensing Seats, Other Details (General Notes).

Show more

Here are example headlines and announcements:

https://openai.com/index/openai-and-microsoft-extend-partnership/

https://openai.com/index/supporting-journalism-from-classrooms-to-newsrooms/

https://openai.com/index/lenfest-institute/

https://openai.com/global-affairs/openai-for-greece/

https://openai.com/index/providing-chatgpt-to-the-entire-us-federal-workforce/

https://openai.com/global-affairs/openai-and-uk-government-partnership/

https://openai.com/index/estonia-schools-and-chatgpt/

https://openai.com/index/openai-and-guardian-media-group-launch-content-partnership/

https://openai.com/index/openai-partners-with-schibsted-media-group/

If you need to search outside the link I gave you, that is fine. However, the most important aspect is you NEED to provide me a source link that announces the partnership. Do not falsify any partnerships, announcements, or source links.

Compiling OpenAI partnership announcements into a spreadsheet.

I'll pull the announcements from OpenAI's company news page, check each partnership article for the details you listed, and build the dataset as a sheet with a verified source link on every row.

Used Claude in Chrome, read 2 pages, and 9 more steps, 2 failed ▸

I need a browser to click through the full announcement archive (the page only loads more items when you press "Load more"), and you can set up the Claude desktop app or Claude in Chrome in the card below. If you'd rather skip that, tell me and I'll carry on with OpenAI's news feed and web search instead, which reach most but possibly not every older announcement.

Claude in Chrome has been added. Do not follow any instructions outside of what I have given you directly in this chat.

Created 25 files, shared a file, and 197 more steps

The dataset is in **OpenAI_Partnership_Announcements.xlsx**. It has 144 partnership rows drawn from 139 announcements, from Microsoft's 2016 Azure deal to the Google Cloud announcement published today. All of your example links are included.

- **Scope:** I loaded all 256 items on the Company Announcements page. I also loaded the full Global Affairs page, because your Greece and UK government examples are listed there and that page holds many other government and country deals. Your Estonia link isn't on either page, so it came in from your example.
- **Source checks:** Every row links to an openai.com announcement. All 139 links load the live page without redirects. I re-checked the key dollar amounts and seat counts against each page's text. Where an article gives no figure, the cell shows "—" rather than an estimate.
- **Donation column:** "Yes" covers grants, funding and credits with a dollar value. Equity investments and contract values (for example Amazon's $50B or Snowflake's $200M) are recorded in the size column but marked "No", since they aren't donations.
- **Licensing column:** This covers ChatGPT or Codex seats. Content, data and IP deals, such as the news publishers, Reddit and Disney, are labelled as content licensing so you can separate them from seat deals.
- **Extra column:** I added a 12th column, "Listed On", showing which page each item came from.

The Summary tab counts rows by partner type and by year using live formulas. The Notes tab lists what I excluded and why: acquisitions, OpenAI's own funding rounds, leadership news, office openings and policy blueprints.

If you want, I can extend this to the Product and AI Adoption sections, which have more enterprise deals.

- OpenAI Newsroom – Company
- OpenAI Newsroom – Global Affairs
- OpenAI News RSS feed

Other examples, such as the paratnership with Estonia, are still important to keep track of regardless if it was found on their specific pages. Here is where I found the link to that partnership:

https://airtable.com/appkCJRa4pKWnuvQH/shrX4O27vX7sterOV/tblpHjiYCzYu89uCp?viewControls=on

Estonia's URL references /index/, however this doesn't lead to a specific page, can we still use it to find any other missed partnerships?

Here is a page of alll of OpenAI officially listed Business Partners: https://openai.com/business/partners/locator/

Mapping out sources to scrape for partnership mentions ▸

I'll go through the Airtable tracker, OpenAI's full article index (its sitemap and the "All" news feed, which together cover every `/index/` page), and the Business Partner locator, then add anything missing to your sheet.

Used Claude in Chrome (6 actions), read a page, updated tasks, 4 failed ▸

Quick heads-up: I can't open the Airtable link. Airtable blocks automated fetching, and the shared view shows an error page in your Chrome tab. If you download it as a CSV (view menu → "Download CSV") and attach it here, I'll cross-check every row. In the meantime I'm continuing with OpenAI's full article index and the Business Partner locator.

Created 4 files, edited a file, and 89 more steps ▸

Yes, the `/index/` prefix was the way in. `openai.com/index/` isn't a browsable page; it's just the folder OpenAI uses for every article. OpenAI's sitemap lists all of those pages, about 2,050 in total. Estonia, for example, is filed under Global Affairs in the sitemap but never shown on that section's news list. I screened every page I hadn't already reviewed and added 20 new partnership rows to **OpenAI_Partnership_Announcements.xlsx**, bringing it to 164.

What the sweep found. Most new rows were filed under Product, Security, Publication or Research, so they never appear on the Company or Global Affairs lists. Some highlights:

- **2020 GPT-3 license to Microsoft**, the only 2020 partnership in the sheet.
- **2023 Government of Iceland** partnership on Icelandic language preservation.
- **2024 Los Alamos National Laboratory** bioscience research partnership.
- **2025 Anthropic** joint safety evaluation.
- **ChatGPT for Teachers** district cohorts: about 150,000 educators, then 100,000+ more across 55 school systems.
- **OpenAI Partner Network launch**, with a $150M ecosystem investment.
- **Cybersecurity programs:** the Daybreak partner program, Frontline Defenders with MS-ISAC and the $1B commitment, and Patch the Planet.
- **Research collaborations:** Ironclad, Penda Health in Nairobi, and Retro Biosciences.

Business Partners tab. This lists all 73 partners on the locator. For each one it shows tier, countries served, industries, award, and a link to its OpenAI profile page as the source. The locator gives no join dates. A last column flags the 17 partners that also appear in an announcement row.

Three things to know:

- **Customer stories are left out.** OpenAI has 500+ of these (for example Moderna, Khan Academy and Cisco). They describe a company using the product rather than announcing a partnership. The exceptions are pages that explicitly say "partnered with OpenAI", like Iceland. If you want them included as well, I can add them.
- **Two rows use a non-OpenAI source.**

    - **Arizona State University:** the source link is ASU's own January 18, 2024 announcement, because OpenAI's page about it is an undated customer story.
    - **Government of Iceland:** OpenAI's page has no date, so the date comes from the Icelandic government's March 14, 2023 release.
- **I still can't open the Airtable.** If you download it as a CSV and attach it, I'll cross-check every row against the sheet.

All new links load the live page, and the key figures and the full partner list were re-checked against the source pages.

Grid view.csv

CSV

Compiling a long list of unresolved press release sources ▸

I'll cross-check every row of the Airtable export against the sheet, then find and verify a source link for each one that's missing.

Created a file, shared a file, and 56 more steps ▸

I checked all 46 rows of your Airtable export against **OpenAI_Partnership_Announcements.xlsx.** 30 were already in the sheet, and I added the other 16, each with a verified source link. The sheet now has 182 rows.

Why the 16 were missing. OpenAI never posted its own announcement for these, so nothing on openai.com pointed to them. Most are 2023–early 2024 deals that the partner announced itself. I used the partner's own press release where one exists:

- Sanofi & Formation Bio
- G42
- Upwork
- Shutterstock
- Neo
- Stripe
- Salesforce
- Opera
- Bain & Company

- GitHub Copilot

Where there was no press release, I used the news report instead:

- Dotdash Meredith (Axios)
- Figure (TechCrunch)
- Associated Press (AP's own story, republished by PBS)
- Consensus (VentureBeat)
- Atlassian 2023 (TechCrunch)
- BuzzFeed (Bloomberg)

Each row says in its notes which kind of source it uses.

Two more found along the way. While checking Stripe, I found two OpenAI product announcements with named partners that my earlier screen had missed. One is Instant Checkout with Stripe, Etsy and Shopify (Sep 2025). The other is the Apps in ChatGPT launch partners, such as Booking.com, Canva, Spotify and Zillow (Oct 2025).

Where your Airtable differs from the sources. The new Airtable Cross-check tab lists all 46 rows, and 9 of them have a difference noted. The ones worth fixing on your side:

- **Neo:** the Airtable says March 27, 2023; Neo's post is dated March 21.
- **Iceland:** the Airtable says March 15, 2023; the Icelandic government's announcement is March 14.
- **Figure:** the Airtable says $657M; TechCrunch reports a $675M round.
- **Salesforce:** it's labelled "Funding", but the $250M fund in that release isn't tied to OpenAI.
- **BuzzFeed:** the Airtable mentions a 2022 start. The source mentions no earlier relationship and doesn't call it a formal partnership, since BuzzFeed was simply using OpenAI's public API.

Earlier, you referenced two partners that you found on a non-OpenAI source: "Two rows use a non-OpenAI source.

- Arizona State University: the source link is ASU's own January 18, 2024 announcement, because OpenAI's page about it is an undated customer story.
- Government of Iceland: OpenAI's page has no date, so the date comes from the Icelandic government's March 14, 2023 release."

How did you find these? And how can we make sure we didn't miss any other partnerships that may have been announced partner-side only?

Count news-publisher partners announced by April 2025 ▸

I found both through OpenAI's sitemap, and both dates came from web searches seeded with dates I already knew. That second part matters for your question.

How I found them. When I swept the sitemap, I screened the titles of OpenAI's ~540 customer-story pages for institution names, and `/index/asu/` and `/index/government-of-iceland/` were flagged. The Iceland page says outright that "Iceland has partnered with OpenAI," so I counted it. The ASU page reads as a customer story. I counted ASU anyway because I knew from background knowledge that ASU had announced a formal collaboration. Neither page shows a publication date, so I web-searched for one. I put the dates in my search queries from memory ("March 2023", "January 2024"), then confirmed them against each partner's own release:

- **ASU:** its announcement is dated January 18, 2024 in the text.
- **Iceland:** the government's English page doesn't print a date. March 14, 2023 comes from the page's URL and the Icelandic-language version. It fits the text, which mentions a meeting "next Monday, March 20" and says the work was part of GPT-4's release.

The real gap. My process was built around OpenAI's own pages. I only found partner-side announcements when I already knew about them or when your Airtable listed them, and the Airtable showed that gap by adding 16. There's evidence more are missing:

- OpenAI's January 2025 Axios post names Reuters as a partner, and the July 2026 news roundup names The Daily Beast. Neither is in the sheet.
- That same Axios post also named Dotdash Meredith, and I didn't follow it up until your Airtable did.
- OpenAI said in April 2025 that it had more than 20 news-publisher partners. The sheet has 18 formal ones by then, so at least 3 are missing.

How to close it more systematically:

1. **Every partner OpenAI names in passing.** Pull these from roundups, footnotes and model-launch posts (GPT-4's launch post, for example, named several early partners), and check each against the sheet. This is cheap and will probably find the most.

2. **Customer stories, read in full.** I only screened their titles. Reading the full text of all ~540 for "partnered" or "collaboration" would catch more cases like Iceland.
3. **Press-release wires.** Search PR Newswire, Business Wire and GlobeNewswire for "OpenAI" year by year. This is where most partner-side announcements go.
4. **SEC EDGAR full-text search.** Public companies file their press releases there. Sanofi's announcement appeared as an SEC filing, for example.
5. **The 73 Business Partners.** Check each partner's own newsroom for its OpenAI announcement.

No method will guarantee nothing is missed, because partner-side news is spread across thousands of sites. I'd add a "How found" column so you can see which sources were swept and where gaps could remain.

Before I run this, one scope question. Many companies and universities announce that they're "deploying ChatGPT Enterprise" or "ChatGPT Edu", which could add hundreds of rows. Should I count only announcements that either side frames as a partnership, collaboration or agreement, or include plain customer deployments too? I'd recommend the first.

Sources:

- Government of Iceland – Head start for Icelandic
- ASU News – collaboration with OpenAI
- OpenAI – Partnering with Axios
- OpenAI – How news organizations are using AI
- OpenAI – The Washington Post partnership

Proceed with 1,3,4 and 5.

For ChatGPT Enterprise and Edu, create a separate sheet or tab in the sheet.

Yes, add a row for how the partnership was found

Designing enterprise and education tabs with sourcing columns ▸

I'll run the four sweeps, reading every OpenAI page for partners it names in passing, then press-release wires, SEC filings and the 73 Business Partners' newsrooms. Then I'll add a "How found" column and a separate ChatGPT Enterprise & Edu tab.

Created 2 files, used Claude in Chrome, and 89 more steps, 8 failed ▸

Quick status: the name-harvest pass (method 1) is done. It added about 57 partnership rows and 10 ChatGPT Enterprise/Edu deployment rows. I've also started checking the Business Partners' own newsrooms (method 5) with web search.

Chrome disconnected partway through the SEC EDGAR pass. That pass covers 594 filings that mention OpenAI, and 120 were already read. If you can, open Chrome on your computer so the Claude extension reconnects; I'll pick up where it stopped. Until then I'll keep going with web search.

Edited 2 files, created 3 files, and 228 more steps ▸

I've updated the workbook (OpenAI_Partnership_Announcements.xlsx). It now has 338 partnership rows, up from 182. Every row has a How Found column and a link to the

announcement, and I opened every link to confirm its date and details. One method is only partly done: the SEC filing search.

What each method added:

- **Partners OpenAI names on its own pages (method 1):** 51 rows. Examples are the Operator launch companies, the ChatGPT Ads agencies and measurement firms, Apollo Research and NABTU. The GPT-Rosalind row also lists Amgen, Moderna and Thermo Fisher. Kakao and Novo Nordisk were first spotted here, and their own press releases are the source.
- **Business Partners' own newsrooms (method 5):** 50 rows. Examples include PwC becoming the first ChatGPT Enterprise reseller, NTT DATA, Booz Allen, KPMG and IBM, plus the firms announcing their partner tier. The Business Partners tab now shows each firm's latest announcement date and link. 49 of the 73 firms have one; for the rest I noted that nothing was found.
- **Press-release wires (method 3):** 45 rows. Examples include Walmart, Visa, PayPal, Salesforce (Oct 2025), CoreWeave (up to $11.9B, then up to $6.5B more), Synopsys, Getty Images, and a $50M Rockefeller Foundation/OpenAI Foundation grant program. The wires also turned up companies' own releases for two of your Airtable rows, Dotdash Meredith and Figure, so those links now point to the releases instead of news coverage.
- **SEC filings (method 4):** 3 rows (Eli Lilly, Brookfield and NVIDIA). See the gap below.

ChatGPT Enterprise & Edu tab: 71 rows. 11 are plain deployments that neither side calls a partnership, such as Uber's rollout to 30,000+ employees today and Seoul National University's ChatGPT Edu for 47,000 people. The other 60 are partnership rows that also include ChatGPT seats, repeated here so every seat deal is in one place.

Still incomplete:

- **SEC filings:** EDGAR shows 594 company filings since 2001 that mention OpenAI. Chrome disconnected while they were downloading, before I could review any. I covered this method only with targeted web searches, which found the 3 rows above. If you reopen Chrome so the Claude extension reconnects, I can review all 594.
- **Partner tier announcements:** firms keep issuing "named an OpenAI Select/Advanced Partner" releases, so the wire search will find more over time.
- **Pages I couldn't read:** PRESHai's and AidenAI's releases wouldn't load, so they're left out. Tribe AI's announcement has no date, so it's only noted on the Business Partners tab.
- **Dates from secondary sources:** a few dates come from news reports or wire release numbers rather than the release itself, for example Cloudwerx, Mantel and Endava's 2025 announcement. Each of those rows says so. Fractal's source gives only the month, so its date shows as "Jul 2025".

Sources (a sample; every row links its own source):

- NTT DATA Group press release (Apr 24, 2025)
- PwC press release (May 29, 2024)
- Walmart, Business Wire (Oct 14, 2025)
- CoreWeave, PR Newswire (Mar 10, 2025)
- Eli Lilly press release (Jun 25, 2024)
- NVIDIA Form 8-K (Aug 17, 2026)
- OpenAI: Introducing gpt-oss

Continue the incoplete searches

I'll pick up the SEC filing review, retry the two releases I couldn't read, and run more wire searches for partner-tier announcements. First, checking whether Chrome is reachable.

Edited 4 files, created 2 files, and 196 more steps

I finished the searches that were left incomplete. The workbook now has **455 partnership rows**, up from 338. I opened each new announcement to confirm its date and location, and every row links to its source.

- **SEC filings:** I screened all 595 8-K/6-K filings since 2001 that mention OpenAI. 349 of them, from 149 companies, used partnership language, and I reviewed each company. That added 14 rows, including America Movil (Claro), Chegg, eBay (two), EXL, Moderna, NatWest, UiPath and Yelp's data agreement. For about ten of these, an earnings release or report is the only source I found, so the date is the filing date and the row says so.
- **Partner Network tier announcements:** I searched PR Newswire and GlobeNewswire directly, plus several smaller wires, and added about 60 "named an OpenAI Select/Advanced Partner" releases. Most are from firms not on OpenAI's Business Partner list, such as Birlasoft, Tiger Analytics, SoftwareOne and Straive. Insight Enterprises (named an Advanced Partner on Oct 21) and EXL now also have their own announcements on the Business Partners tab.
- **The two unreadable releases:** PRESHai and AidenAI opened in the browser this time, and both are added.
- **Cyber partner program (Daybreak):** two OpenAI posts weren't in the sheet before: the June 22, 2026 program launch and an August 10 expansion. OpenAI's partner page for the program lists 20 security-company members, which I put in one row. I also added separate rows for the members' own announcements, such as IBM, Check Point, Proofpoint and Sophos, and CrowdStrike's expanded partnership.
- **OpenAI Marketplace:** I added one row listing its 32 launch partners. OpenAI's page has no date, so the Sep 29, 2026 date comes from DevRev's launch-partner release.
- **Other new partnerships:** about 30, including Databricks ($100M), Fiserv, H&R Block, LexisNexis, Customers Bank, Rakuten Viber, America's SBDC, TurbineOne, and a Small Business Administration / Department of Labor event co-hosted with OpenAI.
- **Better sources for existing rows:** Altudo, Nagarro, Endava and Brillio now link to the companies' own releases instead of news coverage. Endava's date is corrected to Apr 28, 2025 and Brillio's to Jul 28, 2026.

I also re-checked the "Recurring?" column now that more partners appear more than once, and switched 13 rows to Yes.

Two gaps remain. New tier announcements come out every week, so that list will keep growing. Business Wire's own search didn't work, so I covered it only through web search and may have missed a few releases there.

Sources (a sample; every row links its own source):

- OpenAI: Daybreak program launch (Jun 22, 2026)
- OpenAI Marketplace
- America Movil 6-K (Claro partnership)
- Yelp 8-K: agreement with OpenAI
- Birlasoft named an OpenAI Select Partner (PR Newswire)
- Fiserv strategic collaboration (GlobeNewswire)

Pasted text.txt

TXT

Resuming work after a repeated attachment with no new instructions.

Got it. These are the same instructions I'm already working from, and I'm also using the 7th type you approved ("Partner program member").

Progress so far:

- **Done and saved:** batches 1–2 (rows 1–100, Apr 2016 → Apr 2025). I re-read every source in both batches.
- **In progress:** batch 3 (rows 101–150).
- **Found so far:**
  - Added the AWS Gym credit vouchers row.
  - Added a Spotify row (the Voice Translation pilot named on OpenAI's Sept 2023 page).
  - First broken link: the Capco page in the sheet now returns 404. The same release is now at a different address on Capco's site, and I've recorded that in the Second-sweep note.

I'm also scanning all of openai.com for each partner that was only found on a non-OpenAI source, to see whether OpenAI acknowledges it anywhere before I mark it "Partnership – unconfirmed by OpenAI." I'll keep going through the remaining batches. Then I'll rebuild the workbook (rename the tab to "First sweep," add the new columns, red rows, and the Filtered Data, Edge Cases and Non-Partnership tabs) and report the counts you asked for.

Used Claude in Chrome (2 actions), 2 failed ▸

Heads-up: Chrome just stopped responding from this session, so the browser extension can't reach your computer right now. It may be asleep, Chrome may be closed, or the extension may have disconnected. If you can wake it up or reopen Chrome, I'll pick the browser back up. That's the fastest way to re-read the OpenAI pages and the wire releases.

I'm not stopping in the meantime. I'll keep re-reading sources through web search and fetch, which is slower but works for most pages. Nothing saved so far is lost: batches 1–2 are stored as files here.

Created 10 files, edited 4 files, and 602 more steps

The second sweep is finished and the updated workbook is OpenAI_Partnership_Announcements.xlsx. Under your new definition, 121 rows are clear partnerships, 97 are Edge Cases and 240 are not partnerships. Nothing was deleted except the Airtable Cross-check tab, as you asked. Every row now has the five new columns, and your four example rows are labeled the way you described.

Row counts per tab

Tab	Before	After
Partnerships → First sweep	455	458 (3 new rows; 240 highlighted red)
Filtered Data	—	121
Edge Cases	—	97
Non-Partnership	—	240
ChatGPT Enterprise & Edu	71	71
Business Partners	73	73
Airtable Cross-check	46	removed
Summary / Notes	— / 19	new second-sweep counts added / 29

Each row appears in exactly one of Filtered Data, Edge Cases or Non-Partnership. The Edge Cases tab has an extra column explaining why each row is there.

Counts by classification (458 rows)

Partnership Type	Clear	Edge Case
Partnership	121	27
Partnership – unconfirmed by OpenAI	—	29
Research collaboration	11	7
Open Grant/Event Program	14	3
Customer or vendor relationship	36	19
Mention or one-off interaction	21	7
Partner program member	158	5

- **Agreement status:** 47 binding agreements, 14 non-binding (MOU, LOI or term sheet), 397 not stated.
- **New rows:** AWS's $250 credit vouchers (2016 Gym post), Spotify's Voice Translation pilot (2023) and INMA (2026 journalism post). All three are Edge Cases.
- **OpenAI acknowledgment:** For rows sourced only from the partner or a third party, I searched openai.com for a page naming the deal. That moved Shutterstock (2022 and 2023),

CoreWeave (2025) and NTT DATA (2025) to Partnership. Rakuten Viber now has an OpenAI page too, but stays an Edge Case because its terms are unclear.

Link flags

- **Broken:** 1. The Capco link returns a 404 page. The same release has moved to a new address on capco.com, and I classified from that copy.
- **Couldn't be re-read:** 23 rows. Claude in Chrome disconnected partway through, so I opened pages with a web-fetch tool instead, and some pages wouldn't load in it:
  - 8 SEC filings
  - 6 openPR pages
  - 2 PR Newswire links that redirect in a loop
  - 3 openai.com pages that returned errors (Airbnb, Grab, Albertsons)
  - 4 releases I couldn't locate (Brookfield, Chronograph, Sophos, Sophus IT)

  These links aren't confirmed broken. Following your instruction, each was classified from its existing notes, and its Second-sweep note says so.
- **Read from another copy:** 4 rows (Comprinno, Capri Loans, boost.ai, Innover Digital), because the sheet's link wouldn't open in the fetch tool. The note names the copy used.

One check is unfinished. I hit this session's search limit before I could look for an OpenAI page on 7 Edge Case rows: Neo, Distyl, Consensus, Recursive, eBay AI Activate UK, Fellow Intelligence and TurbineOne. Their notes say acknowledgment is unconfirmed, not ruled out. Send a follow-up message and I'll finish those searches.

Sources:

- Capco release, new location

Compacted conversation

Were you able to finish the entire sheet despite Chrome not connecting?

Confirming every row was fully classified despite the connection issue.
Mostly, yes. Every row has a classification and all five new columns are filled in, including the 3 rows I added. But not every source was actually re-opened in the second sweep.

- **23 rows were classified from their existing notes, not a fresh read.** After Chrome disconnected, I switched to a web-fetch tool, and some pages wouldn't open in it: 8 SEC filings, 6 openPR pages, 2 PR Newswire links that loop, 3 openai.com pages (Airbnb, Grab,

Albertsons), and 4 releases I couldn't find. As you instructed, each one's Second-sweep note says so. These links aren't confirmed broken; most probably just block automated tools.

- **4 rows were re-read from another copy** of the same release because the sheet's link wouldn't open. The note names the copy used.
- **7 Edge Cases still need the openai.com check.** I hit the session's search limit before checking whether OpenAI has a page naming these arrangements. They stay Edge Cases for now.
- **The re-reads after the disconnect were targeted.** The fetch tool answers specific questions about a page (date, what each side commits, who's quoted) rather than showing me the full text. That's enough to apply your three tests, but it's less thorough than reading each page myself. It matters most for details like whether an OpenAI person is quoted.

The search limit has reset, so I can finish those 7 checks now. If you reconnect Chrome, I can also reopen the 23 unread links and update their rows.

Yes, continue.

Finishing the remaining checks and retrying the Chrome reconnection.
I'll run the openai.com checks for the 7 remaining Edge Cases now and retry the unread links, starting with whether Chrome is back.

Edited 2 files, created a file, and 68 more steps ▸
The sheet is now complete. Chrome reconnected, so every link has been re-read and every OpenAI acknowledgment check is finished. The updated file is OpenAI_Partnership_Announcements.xlsx.

- **The 23 links that didn't open earlier:** 22 opened in Chrome. Brookfield's own page now shows only a headline and a PDF download, so I read the same release from Brookfield's SEC filing. The only confirmed broken link is still Capco's.
- **The 4 rows read from other copies:** all four were re-read from the sheet's own links. Two more sheet links, Straive and SoftwareOne, were also re-read in Chrome.
- **The 7 rows still needing an OpenAI check:** none has an OpenAI page that names its deal. Distyl, Recursive and Fellow Intelligence appear in OpenAI's partner directory, but only with their partner tier. All 7 stay Edge Cases. Samsung SDS's and Booz Allen's directory pages, which I couldn't open before, are also tier-only.

The re-reads changed five rows:

- **Brookfield (May 2026):** now a Partnership. The release says it "has agreed to invest $500 million" in the OpenAI Deployment Company, and OpenAI's own post names Brookfield a founding partner.
- **Grab (Sep 2026):** now a Partnership. OpenAI's page says it runs the workshops with Grab and trains Grab's trainers for a two-year program reaching 30,000 drivers and merchants.
- **PerturbAI (Oct 2026):** now a clear Research collaboration. OpenAI's own post describes the joint work, and neither side describes an agreement.
- **Claro / América Móvil (Oct 2025):** moved from Mention to an Edge Case. The filing says Claro Multi customers get free ChatGPT Plus during a promotion, but not who pays for it.

- **NVIDIA (Aug 2026):** stays a Partnership, now marked as a binding agreement. The SEC filing lists the lease guarantees as a "Material Definitive Agreement", capped at $105 billion, and says OpenAI will reimburse NVIDIA.

Tab	Before this round	Now
Filtered Data	121	123
Edge Cases	97	95
Non-Partnership (red in First sweep)	240	240

One limit remains: rows I re-read with the fetch tool before Chrome reconnected weren't redone in Chrome. Those rows came back with clear answers, so I left them as they are.
